

INSUL-MATE... Stainless Steel Closed Seals

RPR manufactures STAINLESS STEEL
CLOSED SEALS as an alternative to
our popular wing seal when a stronger
application is required. Our closed seals
are made to fit ½" and ¾" banding
and are produced from .024" hard
temper stainless steel material. The
closed seal is ideal for use with RPR's
strapping on large diameter tanks or
vessels and when

applying expansion,
compression
springs. Closed seals
are mechanically
crimped to give a

strong bond between strapping.
